

UNSOLICITED RECOMMENDATION FOR ATEL AIR AND ZUBA HEAT PUMP

In 2015, we converted our heating and air conditioning system to a Zuba Heat Pump, ably installed by Atel Air. It has performed beyond our expectations, as have the technicians who installed the unit and service it every year.

Our house is 2000 sq. ft. bungalow with a 2000 sq. ft. heated basement. The house is very well insulated, but not exceptional. We set the thermostat at 23° C in winter and in summer. We have a standard electric hot water tank, washer, dryer, well, dishwasher etc. We live in rural Ontario and are serviced by Hydro 1.

Our entire Hydro 1 billing for calendar 2018 was **\$2,317.85**. (The lowest billing was in June (\$151.69) and the highest was October (\$432.53). These results are in line with previous years

We are ecstatic with these results and want to share them with anyone considering a Zuba system.
